

Unified security summary

September 26, 2026 3:49:46 PM

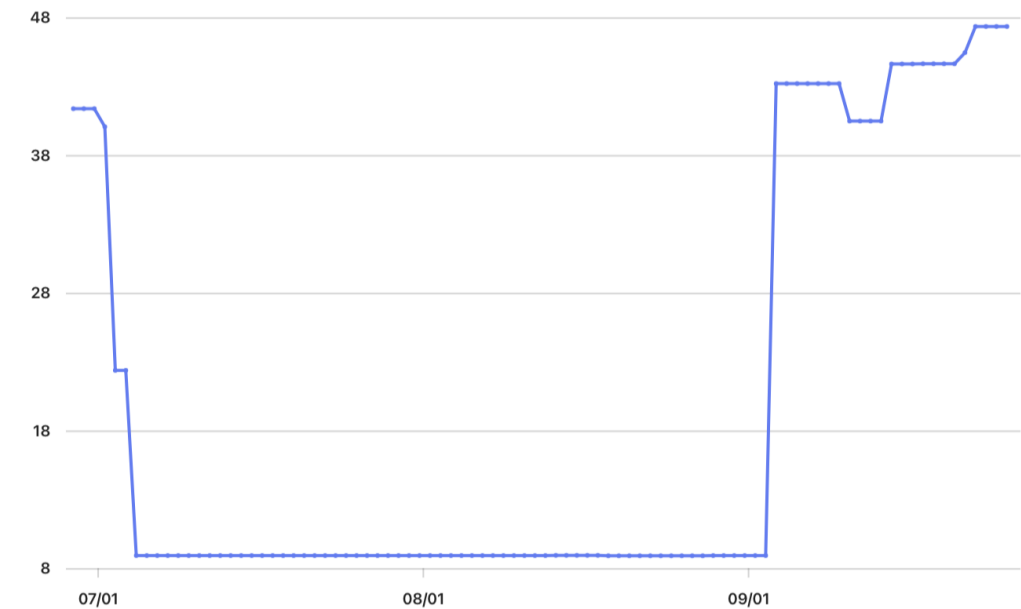

Report is for the last 30 days: August 28, 2026 to September 26, 2026

Posture

Secure score

▲ Security posture improved by 38.43%

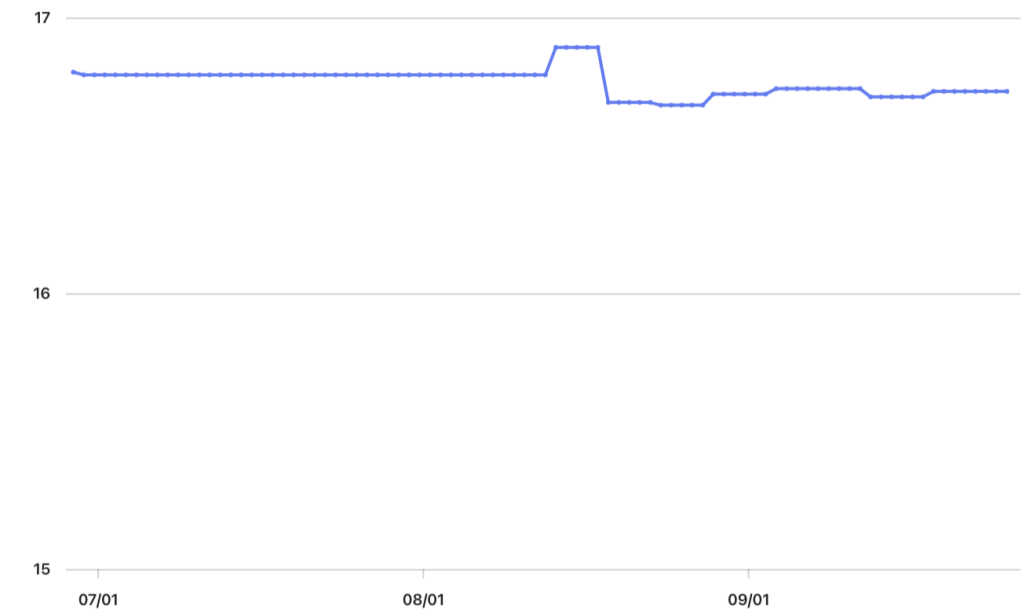

Your 47.42 secure score is similar to the average score of other organizations.

SaaS security score

▲ SaaS security score improved by 0.05%

Your current SaaS security score is 16.87, which is lower than your target score of 99.

Phishing and ransomware protection

Your protection against critical threats has improved

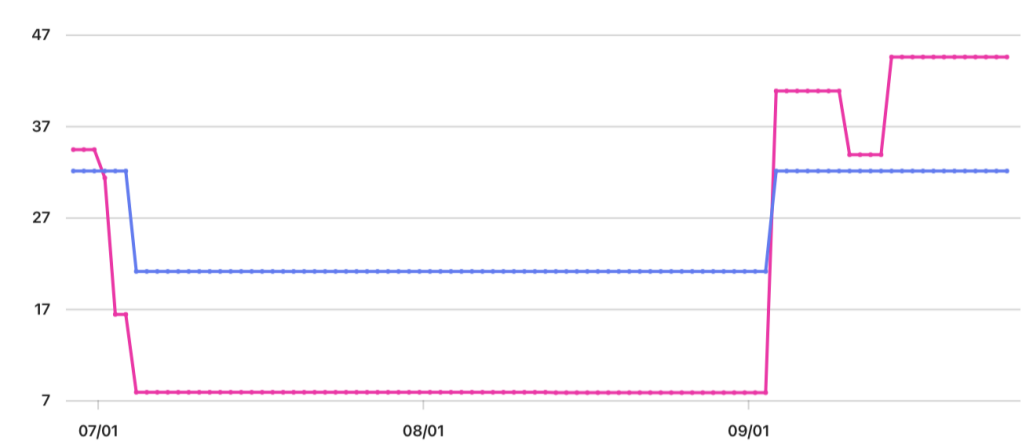

Apply recommendations to improve your security posture.

Phishing protection: 32.32 / 100

▲ +10.98%

Ransomware protection: 44.78 / 100

▲ +36.72%

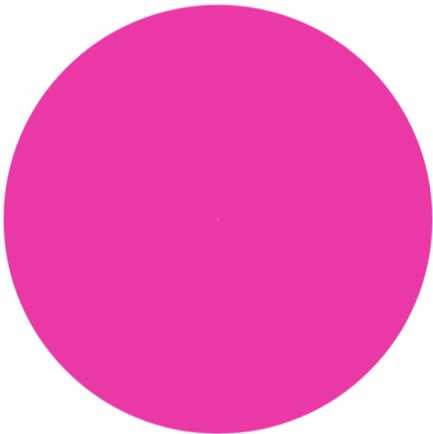

Onboarded devices

100% of your total 1 devices are protected

Secure more devices by onboarding them to Defender for Endpoint.

Newly onboarded devices
1

Protection

Automatic attack disruption

No disrupted attacks

Defender automatically takes containment actions to reduce the impact of attacks.

User accounts

Contained or disabled ⓘ
0

Devices

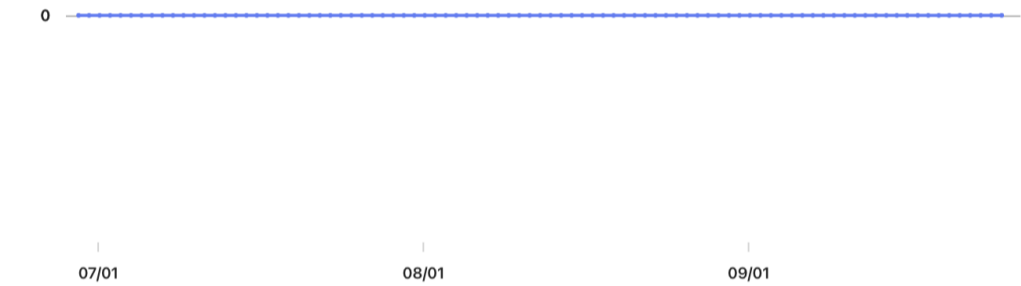

Contained ⓘ

OAuth apps

Disabled ⓘ
0

Antivirus blocks

Microsoft Defender Antivirus **blocked 0** malicious activities

No URLs blocked

Add a new web content filtering policy to help protect your organization from unwanted or potentially harmful content.

Detection

Incidents and alerts

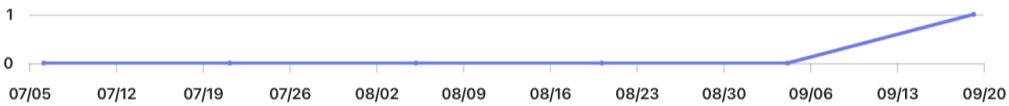

1 alerts were consolidated into 1 incidents

Queue reduction

◆ Alert and incident queue are similar

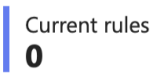

Manage and respond to threats more efficiently with a streamlined queue.

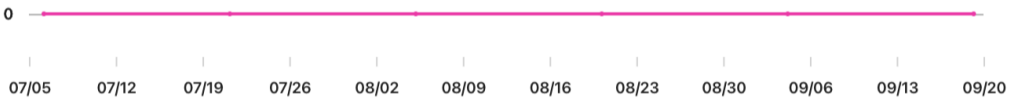

Custom detection rules

No detection rules created

Create custom detection rules to detect and respond to threats.

Alerts

Responses

Investigation and response

Incident response

0 incidents and 0 alerts were resolved

Top 10 severe incidents

Incidents name	Impacted assets	Status
----------------	-----------------	--------

Automated investigation and response

No threats remediated

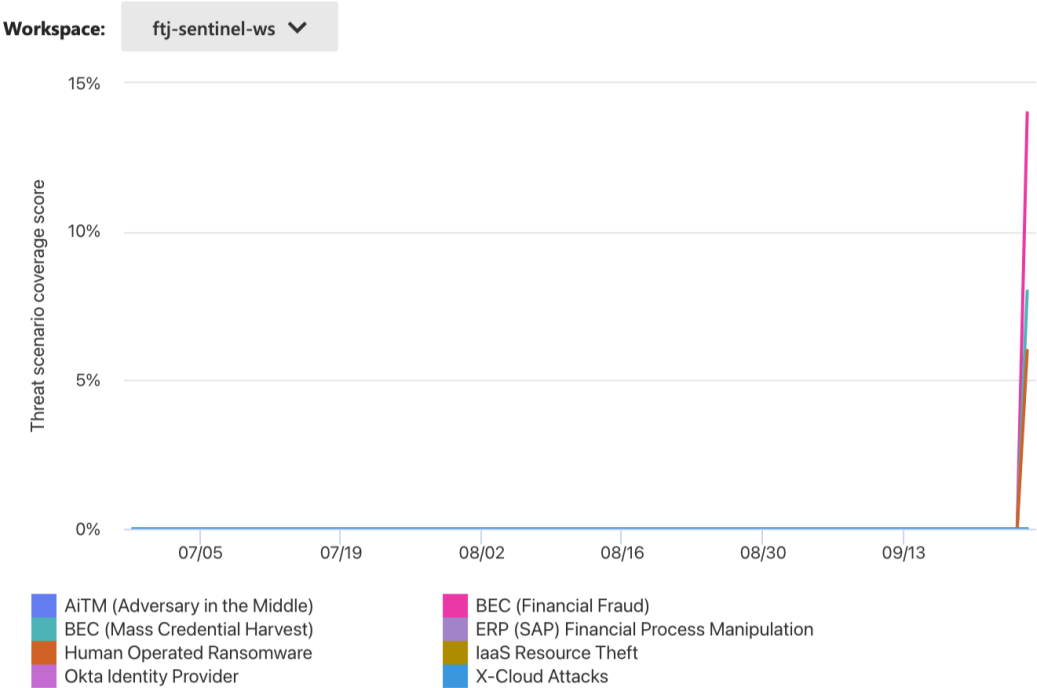

Check your automation settings to help your organization respond to threats more efficiently.

Optimizations

Optimize - threat-based coverage

Threat-based optimizations

Threat-based optimizations recommend adding security controls that help you close coverage gaps to prevent attacks and vulnerabilities.

Optimize - risk-based coverage

Risk-based optimizations

Risk-based optimizations recommend implementing controls to address coverage gaps linked to use cases that may result in business risks or financial losses.
